Flight: with the requirement to have the action and function be supplied on the same organ the required functionality should be handled with a dedicated customisation for the differential between flapping and lift.

Flight through the application of torque into lift has already been addressed and can be used as a model for the amount of effort put into flapping and ability to glide depending on atmosphere passing over a wing.

DNA and RNA

The creation of DNA and RNA sequences rely on the allocation of random elements attached to each of the part marker.

Expectations of number of random elements are expected to be supplied from the Host Complexity as defined from the Souls section.

As a basic genetic code any modification to the genome is expected to pass onto a child in a split to the male parent, basic genetic transfer through inheritance.

With the introduction of new species as NPC's are created along with those adopted from the internet, new growths and forms of genetics are introduced requiring a registration of new genetic markers: tails are 鈔.

Definition of the make up is stored against a body and not the parts, meaning a part being removed from a person would have to have the whole genome transferred at the time of severance.

Characteristics

Body Part	Ear	Centre			West Description															
Aspect	Left Description	Centre			West Description															
Physical	Elf	Long top points with slight markings with highly intricate detailing in the bowl and smooth lower lobe.		Sensitive	Each row of these aspects of a body shape is capable of having a character sheet written up of their own delivering a templatible and exportable set of data aligned to the psychological projection of a particular style as a body part.															
Emotional	White	Extrusion from the head mass is pronounced with deviation to height only when emotionally impaired severely.		Proud	Information does not need to be explicitly defined up front as a whole set of data instead the inference from a base understanding of what 'White' or 'Proud' as definitions of an aspect are first rendered in the conscious visual of the renderer / brain.															
Psychological	Emotive	Protective function of the ear is defined within markings and shape while some elements are off putting for none racial matches.		Evil	Colour and perception of a body part is the reasoning of value from psychological compression to understanding on a body part, an 'Evil' body part is not cruel but a 'Fearful' feature may also be considered 'Emotive'															
Energy	Transgressive	Highly diminutive to outsiders requiring a high level of agreement from others while delivering hyper sensitivity to energy optional outputs.		Lesbian	Energy to capability of being define 'alive' is also the types of energy flowing through a body part along with how aspects of reception and transmission of energies flowing through a being is expected to physically be completed.															
Sexualisation	Bimbo	Smooth lush skin delivers a touch soft to others while giving sensations of lustful vibe through touch.		Rich	Mojo of a body part is the psychological obsession of a creature to fixate in kink while entertaining visual or other form of sensory interaction, intentional sexual features would not explicitly mean a high sexuality in that form the attributed ugliness would be expected as a collective holistic whole of being.															

Body Part Holistic Whole

Aspect	Left Description	Centre	West Description
Physical	Elf	~	Strong
Emotional	White	~	Proud
Psychological	Emotive	~	Evil
Energy	Transgressive	~	Lesbian
Sexualisation	Bimbo	~	Rich

Inclusion of other body parts allows for unseen aspects of life to be present on a person when read: a political reading of a person would deliver the whole definition of that sentiment in another Body Size chart for a body part. When viewed the unseen becomes an aura capable of being seen by those able to perceive in the industry of life expected to view: auras.

Define a fingerprint of a person to define their features and personality.

Using the stars and local weylines as a guide for positions of psychology at birth the age of a person matters to define personality and their access to specific energies from the universe weylines.

# High difficulty is a determiner on the amount of effort you're reliant on from others to have your actuated through the Mediums.												
# The difficulty defines the amount of foreign bodies passing through your system without you knowing due to the quantum effect of 'you projection'.												
# Reality is a defining element to the real nature of the psychologies being operated by other people as real gamers: the higher the value the less bots you would encounter.												
# If you're shooting a gun in reality and know reality for that thing then the object won't change and other people will not effect the outcome.												
# The value of a gun being used and found active in reality is the reality for others were the amount of reality imbued to the gun.

Every number as an integer unit in every number combination and of itself has the following chart applied giving all aspects of a single number a value in the world.															
The need for this is defined the nature of 6 itself were the psychotic nature of the number requires 2 as a concise and absolute definition for balance.															
The division between an integer and its shadow is psychology i how a question is posed in mathematics: how do you calculate the crust of a bubble in thickness at all points of the volume of crust?															
Only working on shadow at the moment to understand why the square root of negative 1 can not equal -1 or √-9 is not -3.															
As a hint to fill this table out; Mirror will only ever tell you you look like shit and an Earth bound Dryad is integer 4 and 1.

Weylines					
Connection to other worlds through physical location in an area.					
Natural Occurring					
# Saturation of an area is the effective prominence of an aspect within the world from 0 to 2 where 2 is the definition of choice for a sentient being. # Ram is on a weyline BTW... Her presence is over one of goblins and demons. Magic people for fuck sake.

Weyline weather					
Circulation of weather is the blood flow of a weyline within a pattern of itself. Providing an area is a body and a mind the layers of a weyline make up for the processing of a pattern. Like music overlaying on top of each other the peaks and troughs defined the amplitude of output to aspects of a weyline. With all musics overplayed on top of the other a global weyline is produced as a separate entity providing an Uber Pattern and amplitude.					
Creation of Weylines and Altars					
Creation upon a location giving rise to the desired effects of a place is the inclusion of items worn by the body of the location. Process of thought from the weyline ability focuses the energies surrounding the area into a single peak of power. Capturing of locations for armies or characters is key to conquest of a land, a person fusing energies into a specific weyline captures the weyline.

Need for specific mentalities to be taken into context of crafting as a social outlet of self is defined within Harlequin as Monster and Celebrity, example of using rape as personal action is core to building a raft.							
Taking positions of work or social engagement crafting positions of craft mentality need to be obtained like Master or Harlequin, by extension to obtain relics specific mentalities to act on others must combine ritual and target.

Oxygenisation rate is to be used with regards to Atmosphere and surrounding mediums of the body to deliver a percentage of oxygen to the blood stream as a drug through respiration organs.

All organs require the transport of oxygen through the system and requires the abundance of the atom in the medium as saturation while a lack in the body.

Respiration requires a matching of types to transfer the high saturation of oxygen to the low, lungs or gills are used to do this.

The circulation rate of the required respiration medium is the available transference from the medium to applicable organs on average, any additional circulation is a custom application from the organ itself.

For instance: 30% saturation would transfer 10% of that value per volume of Atmosphere transferred through an organ, given around 400ml of Atmosphere is inhaled at rest would give 12ml of oxygenation into the blood stream for a single breath.

With any reduction of functionality of the circulation of blood and transferring the oxygenated blood to organs: lungs or heart, the larger organ starts to degrade in performance.

The organ Heart has a function of Metabolism which can be used to follow up on the reductionist values of low oxygenated blood streams.

For a cybernetic body to have energy provided a generator is required either as a built in source to a part or a separate connection.							
Energy output from a generator is expected to match the expected peak performance of the body as a whole for over half an hour, with reserve to maintain normal operation of any critical AI requirements.							
Considerations of wireless or cabled charging through the mains provided by a city a power generator does not have to charge completely until a maximum of an hour has transpired.							
To operate a cybernetic body effectively the power generator has to have a direct connection to each body part: a cybernetic body part is required to be connected to a power source without a natural organic part between the connections.

Hacking of a cybernetic AI is the manipulation of the input into the brain itself and / or the output to external connections.

This allows multiple routes of hacking to be made possible for a cybernetic attack:

- Complete actor override, requiring a full AI brain interface.
- Psychological and behavioural manipulation available from basic models.
- Power reduction or manipulation of generators
- Reflexive modifications of communications between augmentations.
- Analytical interruption for box breaking (remove from a locked network)
- Cross box interception and spoofing (give one cyber AI another AI's data)

The combination of these requires different levels of hacking and knowledge to put into practise.

Each part of the hacking of a cybernetic being requires certain levels of computation to attack and intercept as an active communication form, different levels of energy.

Required equipment to hack a cybernetic AI requires the installation of hacking equipment into the host hackers AI and brain: AI registered legal hardware and is connected to the brain.

Recorded video of cybernetic AI, the content is stored on the users choice unless a hack forces a recording or streaming (spoofing)

Leverage of this type from a cybernetic AI can be played as a video on a screen while a Bionet recording is required to be played to all participants at the same time.

An increase in alcohol abuse and the consumption of alcohol in connection to Bionet attacks will increase the connector value to a maximum of the normal plus the psychological value multiplied by the intoxication of the system.

Adding the laws of genetics to hacking

Lower quality programming is expected to take longer and have more code active in the application.

As a programme is built the selections from the map for functionality is required as a base while all post-ceding characters is the effort to build that part.

A virus with a small AI from a medium programmer would look like:

DNA	慥穰荫領喘嶄屢耳痘鯫薛
RNA	匕觉婀兒瞑瞞轆体呗嘯脣
Mutable	0.0001
